Projekt Erasmus+ / Erasmus+ Project

03.02.2022-03.06.2023

As part of this project, students, teachers and entire school communities carried out tasks on the subject of taking care of the natural environment. Joint tasks developed skills such as: the use of English and ICT tools in international cooperation.

Spain, CEIP Santiago de la Riber

One of the topics was the protection of insects, especially those that pollinate flowers.

Students visited the Beekeeping Museum in Swarzędz, participated in workshops and learned a lot about the life of bees

The museum was established as a branch of the National Museum of Agriculture in Szreniawa in 1999 on the premises of the beekeeping open-air museum, which had existed since 1963.

About bees:

<https://www.youtube.com/watch?v=brKtmyzbFSw&t=13s>

Regardless of who
is the author of the quote:
"when bees disappear
from the face of the earth,
man will only have four years to live..."

bees have a decisive influence
on maintaining the correct
biological balance in ecosystems

A flower meadow is an unusual cluster of plants that have many advantages.

They are very beneficial for both animals and humans.

Flower meadows are almost self-sufficient - after sowing them, it is enough to mow them once or twice a year.

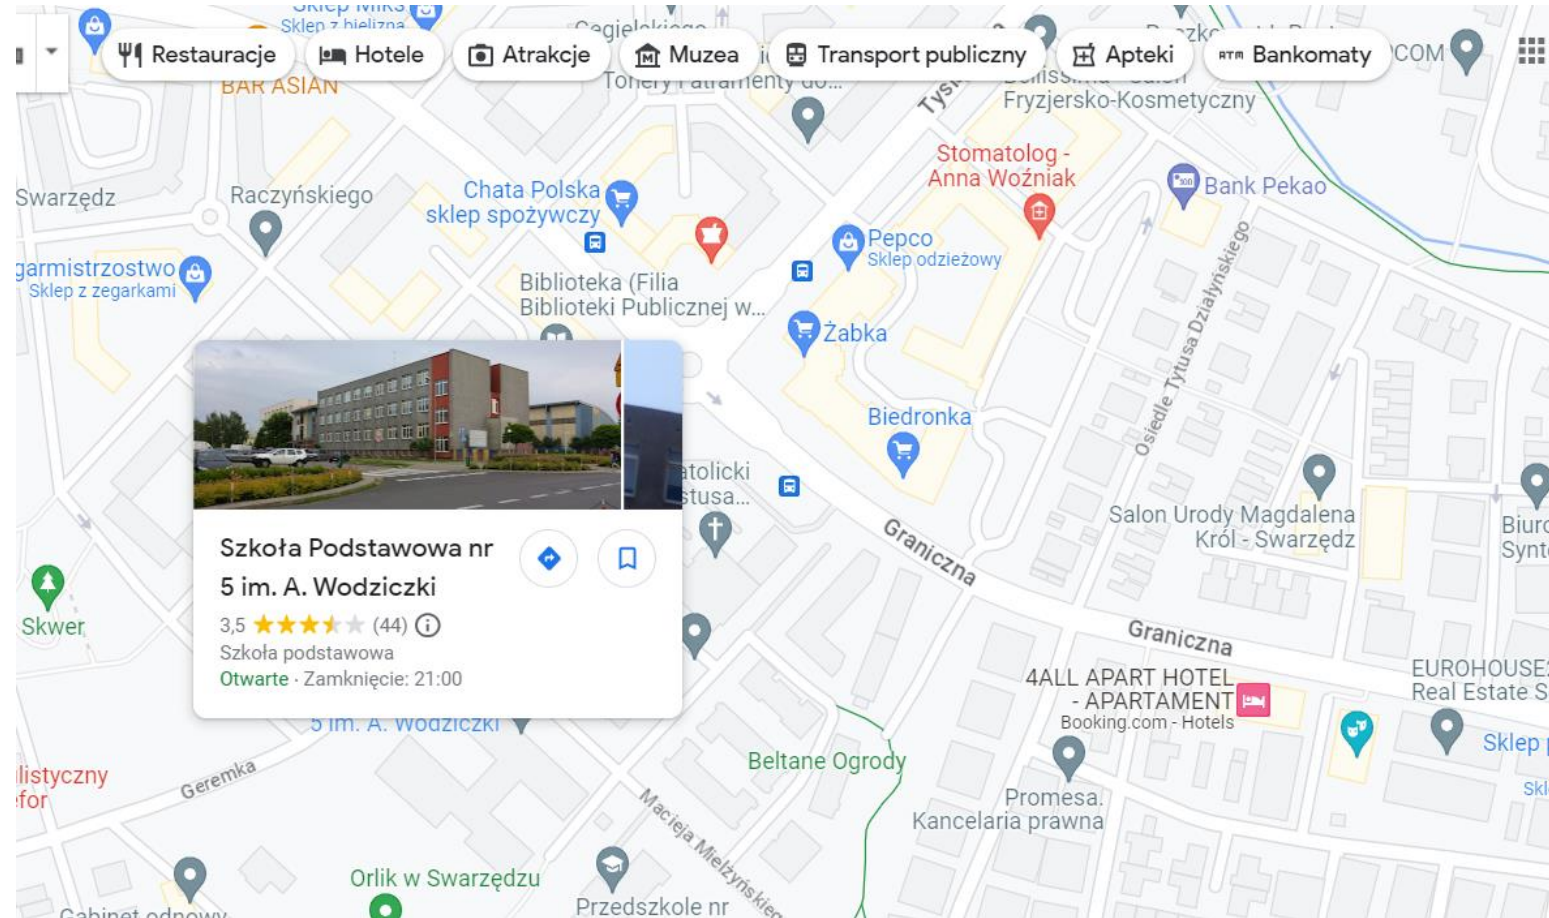

And most importantly - they are melliferous, because thanks to them bees can produce extremely healthy honey.

Their biodiversity is very valuable to our environment.

There will be a place to create
a flower meadow near schools.

You have to find the right place.

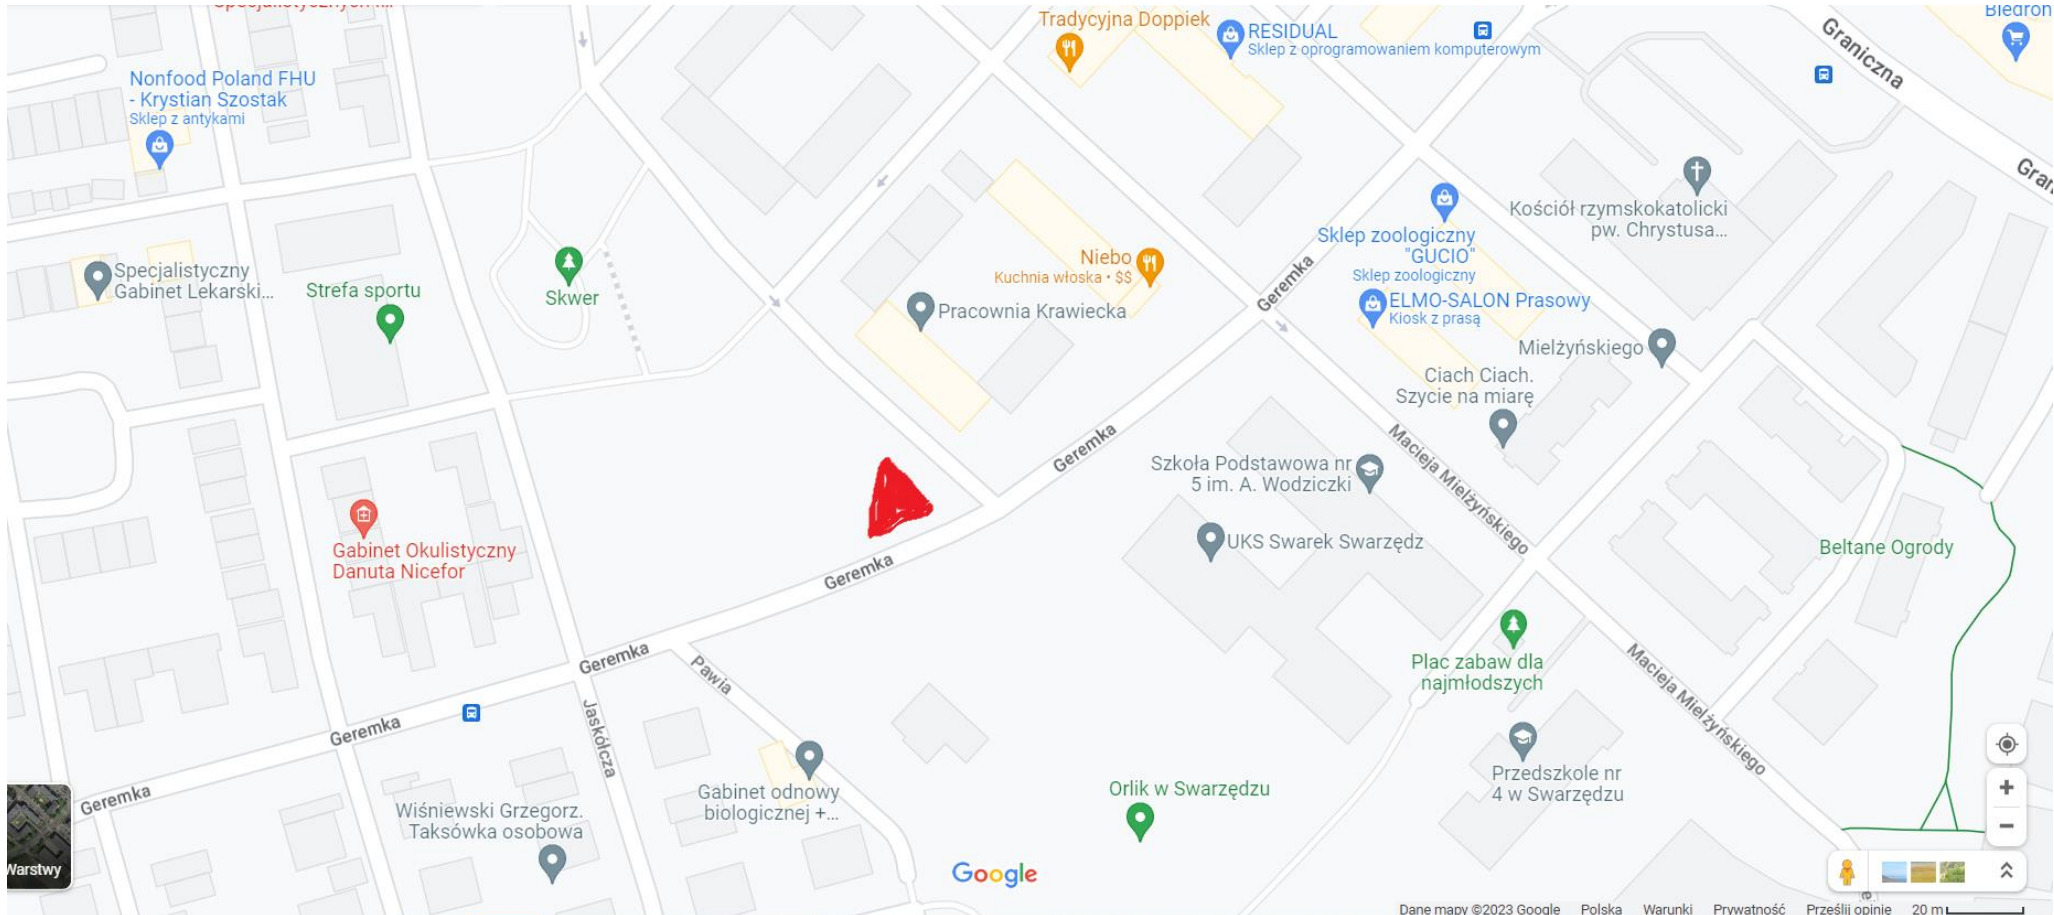

You have to meet with the local authority.
Meeting with Mayor Grzegorz Taterka regarding the location of our flower meadow at Primary School No. 5 in Swarzędz

Well done!

That is our location:

City and Commune Office in Swarzędz,
The Road Infrastructure Department
helped prepare the ground.

The students sowed the seeds.

The area had to be fenced off. We bought a rope and wooden stakes.

It had to be watered on hot days. It was worth it:

A paradise for insects :

Szkoła Podstwową nr 5 w Swarzędzu
